

## Objectives of the Workshop

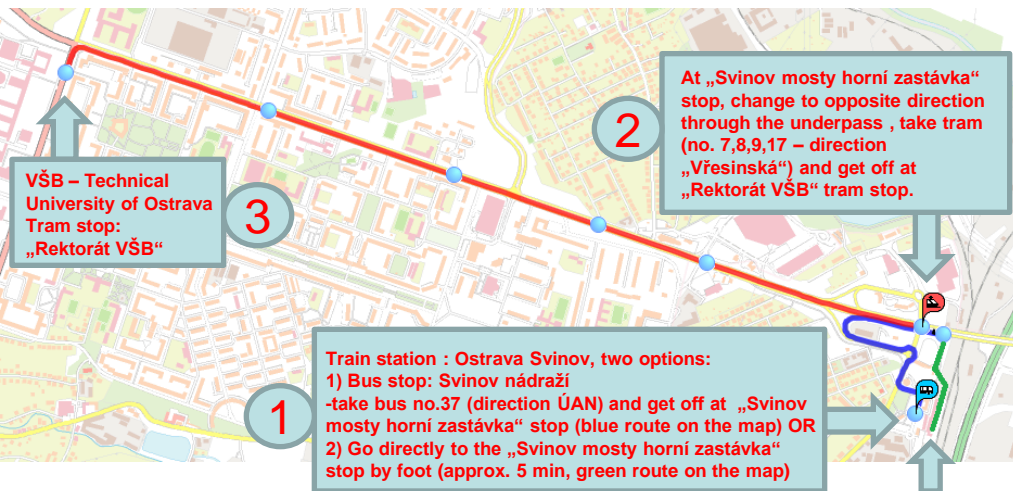

Global navigation satellite systems (GNSS) navigation and positioning applications have become an essential infrastructure of the modern society.

EGNOS and Galileo will be very useful tools for people with limited mobility and orientation, helping them to better use public transport and increase their mobility.

New applications where the more precise positioning and position reporting would imply high added value for the users and need to be examined.

The GUF Workshop objective is to conduct a professional discussion between end users and European institutions responsible for the satellite navigation deployment. Following the discussions, the workshop participants will lay down common conclusions and recommendations from the field of crisis management and emergency response services in the deployment and practical operation of Galileo and EGNOS systems.

The Ministry of Transport of the Czech Republic takes a great pleasure in inviting you to take part in the „Global Navigation Satellite System (GNSS) services for people with limited mobility or orientation“ GUF workshop.

### Address:

VŠB-Technical University of Ostrava, 17. listopadu 15/2172, 708 33 Ostrava - Poruba, Czech Republic, Building D, Room No D206, Loc.: 49°49'56.766"N, 18°9'47.850"E (<http://www.vsb.cz/en/okruhy/contacts-maps>)
